

Study programme: HYGIENE, PREVENTIVE MEDICINE AND EPIDEMIOLOGY

ANNOTATION

The PhD study "Selected Health Indicators in Health Care Workers" is devoted to the analysis of risk factors present in health care workers (HCWs) of a tertiary care hospital. The aim will be to explore prevalence and impact of the risk factors, mostly metabolic, on HCWs' health, work performance and professional satisfaction. Special emphasis will be placed on mental health, its indicators and association with certain objective parameters. Common laboratory parameters, questionnaires and, after consideration, other methods will be applied to obtain relevant data. Depending on a particular student, the same data will be obtained from more healthcare settings with a potential comparison, even, if possible, of various countries or at least regions.
