

## **Study programme: SOCIAL MEDICINE**

### **ANNOTATION**

Social Medicine studies social determinants of health. It deals with demographic trends of the population in relation with health. It put emphasis on health support and prevention of disease including the impact of working conditions on health. It examines the importance of health care for maintaining and improving the health of the population. It also focuses on the implementation of research evidence into the practice using the concept of Evidence-Based Public Health. It analyses ethical dilemmas and ethical limits in medicine, in historical and present context.
